

GreenLeaf E-Commerce – Internal Audit Report

Auditor: Cameron Naidoo | Audit Date: 23 June 2026 | Scope: A.8.13 Information Backup

NON-CONFORMITY REPORT – NC-001

Section	Detail
Finding Title	Offsite Cloud Backup Destination is Configured but Not Utilized
Rule / Requirement	ISO 27001 Annex A Control A.8.13 requires that backup copies of information are maintained, protected, and regularly tested. The GreenLeaf Access Control Policy mandates that backups be stored offsite or in the cloud.
Evidence Observed	The IT Manager provided a screenshot of the AWS S3 bucket GreenLeaf-Backups. The bucket is empty. No data has been replicated to the cloud. A verbal note from IT stated: "We set up the cloud bucket last week, but we haven't migrated the data over yet."
Severity	MAJOR NON-CONFORMITY – This is a systemic failure. The organization has no offsite recovery capability. In the event of a fire, ransomware, or hardware failure, GreenLeaf cannot recover its customer data, employee records, or website code. The business faces potential bankruptcy.
Immediate Action Required	1. Assign a designated IT staff member to begin the cloud migration immediately (today). 2. Configure automated replication from the local NAS to the AWS S3 bucket. 3. Verify that the first successful cloud backup has completed within 48 hours.
Target Closure Date	25 June 2026 (48 hours from today)
Status	Open – Awaiting action

NON-CONFORMITY REPORT – NC-002

Section	Detail
Finding Title	Backup Restoration Testing Has Not Been Performed Within Audit Period
Rule / Requirement	ISO 27001 A.8.13 requires that backup copies are regularly tested . The GreenLeaf Policy mandates quarterly testing.
Evidence Observed	The only testing report provided was dated December 2025 (6 months ago). No testing has been documented for 2026.
Severity	MAJOR NON-CONFORMITY – The organization cannot demonstrate that the backups (once migrated) will actually be recoverable. Untested backups are considered "No Backup" in an audit.
Immediate Action Required	1. Once the cloud backup is successfully populated (NC-001 closed), schedule a restoration test within 7 days. 2. Document the test results, including the time taken to restore a sample file and the success/failure rate.
Target Closure Date	30 June 2026
Status	Open – Dependent on NC-001 closure
